

ML Coding Exercise - Talk to your website

Given a website URL, we want to have a conversational interface to talk to URL content.

Create 2 APIs for this:

- `index_url (URL)`
- `ask(URL, question)`

Example requests:

- `index_url(https://en.wikipedia.org/wiki/Brazil)`
- `ask(https://en.wikipedia.org/wiki/Brazil, "what is the population of Brazil?")`
- `ask(https://en.wikipedia.org/wiki/Brazil, "when was the Treaty of Tordesillas?")`

Extra points:

- Create a chat API for it, i.e. having follow-up questions etc
- Code it as an API endpoint or SDK
- Any other ideas welcome :)
